

GROUP HIRE: Up to 5 Scientist II Appointments (academic equivalent to Assistant Professor)

ABOUT THE HNRCA

The Jean Mayer USDA Human Nutrition Research Center on Aging at Tufts University (HNRCA) is one of six human nutrition research centers in the United States supported by the Agricultural Research Service (ARS), the intramural research branch of the USDA. Located on the Tufts Health Sciences campus in downtown Boston, the HNRCA is operated by a cooperative agreement between the USDA and Tufts University, with most of the 140 scientists and staff employed by Tufts University.

The HNRCA provides a strong research environment that involves multiple research laboratories that engage in cellular and molecular studies, animal studies, human metabolic studies, and epidemiological research. The six in-house scientific core units support the research programs by providing expertise and services that include a 25,000 square foot human nutrition metabolic research unit, an AAALAC- accredited animal facility, a clinical chemistry laboratory, mass spectrometry, biostatistics, data management and extensive pre-award research and planning. See hnrca.tufts.edu for more information.

ABOUT THE POSITIONS

The HNRCA is increasing its scientific research capacity with the hire of up to five scientists (academic equivalent to assistant professor). A successful candidate should have strong potential for multidisciplinary collaboration in basic and clinical research involving expanding human healthspan or a research portfolio that includes other age-related topics such as cellular senescence, etc. Candidates should be highly motivated and committed to the HNRCA's mission to promote healthy aging through nutrition science, diet and physical activity. We will hire scientists who represent a variety of disciplines and share a commitment to work collaboratively to promote a cohesive Center-wide research agenda. While the specific field of expertise is open, we are interested in scientists whose expertise in aging will build on the existing work of the HNRCA or can be leveraged to develop new complementary focus areas. We are also looking for scientists who have worked in environments that encouraged a team science approach to research. The successful candidates should have a PhD, MD or equivalent and 3-5 years of experience, including postdoctoral training, and have strong potential to direct their own research, engage in team science and secure independent grant funding.

Individuals wishing to apply should submit a letter of application, curriculum vitae, statement of research interest and list of three references to Eleanor Davison at Eleanor.davison@tufts.edu.

Tufts University is an Equal Opportunity/Affirmative Action Employer. We are committed to increasing the diversity of our faculty. Members of underrepresented minority groups are encouraged to apply.
